

## Immediate savings

### Long-term competitiveness

Modern GPS-based fleet management saves valuable time, a lot of money and has been proven to increase the productivity of your fleet.

#### Features

**Live tracking of your vehicles**

Find out where your vehicles are located. Around the clock and worldwide!

**Digital steering protocol**

Our driving log solution with mobile app is unique in simplicity & function!

**Fuel evaluations**

By importing fuel data, you have a precise overview of the consumption of your vehicle fleet.

**No software installation**

Thanks to purely web-based software, there is no installation work involved with our system!

**Automatic logbook**

All your trips are automatically recorded in a logbook suitable for the tax office.

**Geofence alerts**

Define automated alerts when a vehicle enters or leaves an area.

**Reliable & safe**

Encrypted transmission, regular backups and of course 100% GDPR compliant.

**Quality from Austria**

Our system comes from an Austrian private company with in-house development.

## One system

### Countless benefits

The areas of application and thus the advantages of using our telematics are almost limitless! Below you will find an excerpt of the advantages that inspire our customers the most:

- ✓ Optimized routing reduces KM performance
- ✓ Relief for employees through automation
- ✓ Effective anti-theft protection thanks to live tracking
- ✓ Detect fuel theft immediately
- ✓ Reduction of confusing paperwork
- ✓ Control and reduction of CO2 emissions
- ✓ Temperature and cold storage room monitoring
- ✓ Significantly reduced downtimes
- ✓ Possibility of working time control
- ✓ Prevent unauthorized use and private trips
- ✓ Avoidance of penalties (tax office, administrative penalties)
- ✓ Recording of machine operating hours
- ✓ Vehicle data via Canbus and FMS
- ✓ Automated tachograph download

## We look forward to hear from you!

Our fleet consultants are at your side with advice and action to reduce your fleet costs and increase your productivity. Contact us now!

## Safety on the transport route

### TAPA – Transported Asset Protection Association

The technical safety standards developed by TAPA EMEA regarding GPS monitoring during the transport of goods can be met 100% with our telematics system.

- ✓ **Tracking**  
Live monitoring of the vehicle
- ✓ **Multiple communication methods**  
SMS, GPRS and LTE
- ✓ **Backup battery**  
Over 24h live tracking possible after disconnection of the power supply
- ✓ **Emergency button**  
Mounted in driver's cabin
- ✓ **Transmission interval changeable**  
Access the device remotely at any time
- ✓ **Extern antenna**  
Additional powerful antenna
- ✓ **Door monitoring**  
All doors are monitored by contacts for unplanned opening
- ✓ **Audible Alarm**  
In event of an unscheduled door opening

## Technology Alerts

Geo-fences can be generated automatically along the planned route for TAPA transports. If you leave the defined area, an alarm message is sent automatically. In addition, all alarm messages required by TAPA are integrated. The reporting information can be configured individually. Other alarm messages, such as from cooling sensors, are possible.

- ✓ **Device manipulation**  
Case opening & disconnection from the vehicle
- ✓ **Door opening**  
Driver's cab & load compartment separately
- ✓ **Emergency button**
- ✓ **Battery status**  
Vehicle battery & backup battery separately
- ✓ **Standstill alarm**  
Unscheduled stops are detected
- ✓ **Signal loss**

Our telematics solution works with all vehicle types (tractor units, trailers, box trucks, cars) and brands. Since our system works fully autonomously, it can be used in any vehicle.
